GROSS HORSEPOWER
386 kW
518 HP

NET HORSEPOWER
371 kW
498 HP

MAXIMUM GVW
75080 kg
165,520 lb

STANDARD EQUIPMENT FOR BASE MACHINE

**ENGINE:**
- Automatic Idling Setting System (AISS)
- Alternator, 50A/24V
- Batteries, 2 x 12V/170Ah
- Engine, Komatsu SAA6D140E-5
- Mode selection system
- Starting motor, 1 x 11.0 kW

**CAB:**
- Ashtray
- Cigarette lighter
- Cup holder
- Electronic dump control system
- Electronic maintenance display/monitoring system
- Operator seat, reclining, suspension type with retractable 78 mm 3" width seat belt
- Passenger seat
- Power window (LH)
- ROPS cab with FOPS, sound suppression type

- Space for lunch box
- Steering wheel, lift and telescopic
- Sunvisor
- Laminated glass, front
- Two doors, left and right
- Windshield washer and wiper (with intermittent feature)

**LIGHTING SYSTEM:**
- Back-up light
- Hazard lights
- Headlights with dimmer switch
- Indicator, stop and tail lights

**GUARD AND COVERS:**
- Exhaust thermal guard
- Fire protective covers
- Drive shaft guard (front and rear)

**SAFETY EQUIPMENT:**
- Alarm, backup
- Catwalk with hand rails
- Cockpit temperature alarm and light
- Front brake cut-off system
- Hand rails for platform
- Horn, electric
- Ladders, left and right hand sides
- Overrun warning system
- Rearview mirrors and undervisor mirrors
- Supplementary steering

**OTHER:**
- Electric circuit breaker, 24V
- Side markers

**TIRES:**
- 18.00 R33

OPTIONAL EQUIPMENT

**CAB:**
- Air conditioner
- Heater and defroster
- Power window (RH)
- Radio, AM/FM
- Radio, AM/FM with cassette
- Seat belt, 50 mm 2" width
- Seat belt, 78 mm 3" width for passenger seat
- Seat, fabric materials
- Sun visor, additional

**BODY:**
- Spill guard, 150 mm 6" [90 kg 200 lb]
- Spill guard, 250 mm 10" [145 kg 320 lb]

**GUARD:**
- Engine under guard [25 kg 60 lb]
- Platform guard, right hand side [35 kg 80 lb]
- Transmission under guard [95 kg 210 lb]

**LIGHTING SYSTEM:**
- Back-up lights, additional
- Fog lights
- Work light, RH and LH sides

**TIRES:**
- 18.00 R33 tires

**SAFETY:**
- Automatic spin regulator (ASR)
- Anti-lock brake system (ABS)
- Automatic retard speed control (ARSC)
- Supplementary steering, automatic
- Rear view camera and monitor

**ARRANGEMENT:**
- Batteries for cold area arrangement
- Cold area arrangement
- Sandy and dusty area arrangement

**GAUGE:**
- Dump position alarm & warning light
- Engine oil filter warning alarm and light
- Tachograp

**OTHER:**
- Alternator, 75 A
- Controlled grasing
- Engine side covers
- Fast fill coupler for fuel tank
- Fire extinguisher
- Gas charge tool
- Gas spring for engine hood
- Muffler (no body heating type)
- Payload meter
- Memory card type
- PM service connectors
- Pull hook, rear
- Radiator shutter, canvas type
- Tool kit
- Vandalism protection

[ ] shows the amount of increased weight

Standard equipment may vary for each country, and this specification sheet may contain attachments and optional equipment that are not available in your area. Please consult your Komatsu distributor for detailed information.

www.Komatsu.com Printed in Japan 200701 IPP AD (10)
Productivity Features

- High performance Komatsu SAA6D140E-5 engine
- Net horsepower 371kW 498HP
- Mode selection system
  (Variable horsepower control in Economy mode)
- Automatic Idling Setting System (AISS)
- 7-speed, fully automatic K-ATOMiCS transmission
- Fully hydraulic controlled wet multiple-disc brakes and retarder
- Retarder absorbing capacity (Continuous descent) 662kW 887HP
- Long wheelbase and wide tread
- Large high strength body
- Heaped capacity 27.3m³ 35.7yd³
- Small turning radius 7.2m 23.7”
- Automatic Retard Speed Control (ARSC)(Option)
- Payload Meter II (PLM II)(Option)

Harmony with Environment

- Low operation noise
- Lead-free radiator
- Brake cooling oil recovery tank

Operator Environment

- Wide, spacious cab with excellent visibility
- Ergonomically designed cab
- Easy-to-see instrument panel
- Ideal driving position settings
- K-ATOMiCS with “Skip-shift” function
- Hydropneumatic suspension
- Built-in ROPS/FOPS cab
- Viscous cab mounts
- Electric body dump control
- Supplementary steering and secondary brake
- Three-mode hydropneumatic suspension (Automatic suspension) (Option)

Reliability Features

- Komatsu components
- High-rigidity frame
- Rigorous dump body design
- Reliable hydraulic system
- Sealed DT connectors
- Pedal-operated secondary brake
- Antilock Brake System (ABS)(Option)
- Automatic Spin Regulator (ASR)(Option)

Easy Maintenance

- Advanced monitoring system
- Wet multiple-disc brakes and fully hydraulic controlled braking system
- Extended oil change interval
- Centralized arrangement of filters
- Disc wheels (Flange type rims)
- Electric circuit breaker
- Centralized greasing points (Option)

Machine shown may include optional equipment.
PRODUCTIVITY FEATURES

Komatsu develops and produces all major components, such as engines, electronics and hydraulic components, in-house. With this “Komatsu Technology,” and adding customer feedback, Komatsu is achieving great advancements in technology. To achieve both high levels of productivity and economical performance, Komatsu has developed the main components with a total control system. The result is a new generation of high performance and environment friendly machines.

High performance Komatsu SAA6D140E-5 engine
Powerful turbocharged and air-to-air aftercooled Komatsu SAA6D140E-5 engine provides 371 kW (498 HP) (Net). This engine realizes high power in low fuel consumption with Common Rail Injection system (CRI), and thus it delivers higher travel speeds with high horsepower. Also high torque at low speed, impressive acceleration, and low fuel consumption ensure maximum productivity

Mode selection system
The system allows selection of the appropriate mode between two modes "Power mode" or "Economy mode" according to each working condition. The mode is easily selected with a switch in the operator's cab.

Power mode
Great productivity can be attained by taking full advantage of high output power. It is appropriate for job sites where larger production uphill-hauling is required.

Economy mode (Variable horsepower control)
The engine power automatically changes depending on loaded or unloaded conditions always to use an optimum speed gear. It is appropriate for light work on flat ground.

Automatic Retard Speed Control (ARSC) (Option)
ARSC allows the operator to simply set the downhill travel speed and go down slopes at a constant speed. As a result, the operator can concentrate on steering. The speed can be set at increments of 1 km/h for 0.6 MPH per click (±5 km/h; 3.1 MPH of setting speed adjustment) to match the optimum speed for the slope. Also, since the retarder cooling oil temperature is always monitored, the speed is automatically lowered.

Automatic Idling Setting System (AISS)
This system facilitates quick engine warm-up and cab cooling/warming. When setting the system ON, engine idle speed is kept at 945 rpm when coolant temperature is 50°C or lower. Speed automatically returns to 750 rpm when coolant temperature reaches 50°C or lower.

K-ATOMiCS (Komatsu Advanced Transmission with Optimum Modulation Control System)

Automatic Idling Setting System (AISS)

90°C 122°F or lower. Speed automatically returns to 750 rpm when coolant temperature reaches 50°C 122°F.

Powerful turbocharged and air-to-air aftercooled Komatsu SAA6D140E-5 engine realizes high power in low fuel consumption with Common Rail Injection system (CRI), and thus it delivers higher travel speeds with high horsepower. Also high torque at low speed, impressive acceleration, and low fuel consumption ensure maximum productivity.

High performance Komatsu SAA6D140E-5 engine
Powerful turbocharged and air-to-air aftercooled Komatsu SAA6D140E-5 engine provides 371 kW (498 HP) (Net). This engine realizes high power in low fuel consumption with Common Rail Injection system (CRI), and thus it delivers higher travel speeds with high horsepower. Also high torque at low speed, impressive acceleration, and low fuel consumption ensure maximum productivity.

Mode selection system
The system allows selection of the appropriate mode between two modes "Power mode" or "Economy mode" according to each working condition. The mode is easily selected with a switch in the operator's cab.

Power mode
Great productivity can be attained by taking full advantage of high output power. It is appropriate for job sites where larger production uphill-hauling is required.

Economy mode (Variable horsepower control)
The engine power automatically changes depending on loaded or unloaded conditions always to use an optimum speed gear. It is appropriate for light work on flat ground.

Automatic Retard Speed Control (ARSC) (Option)
ARSC allows the operator to simply set the downhill travel speed and go down slopes at a constant speed. As a result, the operator can concentrate on steering. The speed can be set at increments of 1 km/h for 0.6 MPH per click (±5 km/h; 3.1 MPH of setting speed adjustment) to match the optimum speed for the slope. Also, since the retarder cooling oil temperature is always monitored, the speed is automatically lowered.

7-speed, fully automatic K-ATOMiCS transmission
The K-ATOMiCS (Komatsu Advanced Transmission with Optimum Modulation Control System) automatically selects the optimum gear according to vehicle speed, engine speed and the shift position you’ve chosen. The result: the best gear for any driving situation.

Automatic Retard Speed Control (ARSC) (Option)
ARSC allows the operator to simply set the downhill travel speed and go down slopes at a constant speed. As a result, the operator can concentrate on steering. The speed can be set at increments of 1 km/h for 0.6 MPH per click (±5 km/h; 3.1 MPH of setting speed adjustment) to match the optimum speed for the slope. Also, since the retarder cooling oil temperature is always monitored, the speed is automatically lowered.

Fully hydraulic controlled wet multiple-disc brakes and retarder
Wet multiple-disc brakes ensures highly reliable and stable brake performance. The large-capacity, continuously cooled, wet multiple-disc brakes also function as a highly responsive retarder which gives the operator greater confidence at higher speeds when traveling downhill.

• Retarder Absorbing Capacity (continuous descent): 662 kW (887 HP)
• Brake Surface Area (rear): 50,847 cm² (7,881 in²)

Long wheelbase and wide tread
With an extra-long wheelbase, a wide tread and an exceptionally low center of gravity, the HD405-7R hauls the load at higher speed for greater productivity, and delivers superior driving comfort over rough terrain.

Large high strength body
A wide target area makes for easy loading with minimal soil spillage and more efficient hauling. The body is built of 160 kg/mm² 227,520 PSI wear-resistant high-tensile steel with a Brinell hardness of 500. The V-shape design also increases structural strength, and provides excellent load stability.

Small turning radius
The MacPherson strut type front suspension has a special A-frame between each wheel and the main frame. The wider space created between the front wheels and the main frame increases the turning angle of the wheels. The larger this turning angle, the smaller the turning radius of the truck.

Payload Meter II (PLM II) (Option)
PLM II allows the production volume and the working conditions on the dump truck to be analyzed and controlled directly via a personal computer. The system can store up to 2900 working cycles.
**OPERATOR ENVIRONMENT**

**Wide, spacious cab with excellent visibility**
Wide windows in the front, side and back, plus plenty of space in the richly upholstered interior, provide quiet, comfortable environment from which to see and control every aspect of operation. Front under view mirrors and side under view mirrors have been added to improve safety.

**Ergonomically designed cab**
The ergonomically designed operator’s compartment makes it very easy and comfortable for the operator to use all the controls. The result is more confident operation and greater productivity.

**Easy-to-See instrument panel**
The instrument panel makes it easy to monitor critical machine functions. In addition, a caution light warns the operator of any problems that may occur. Problems are recorded in the monitor and indicated as service codes. This makes the machine user friendly and easy to service.

**Ideal driving position settings**
The 5-way adjustable operator seat and the tilt-telescopic steering column provide an optimum driving posture, for increased driving comfort and more control over machine operation. The suspension seat dampens vibrations transmitted from the machine and reduces operator fatigue as well as holding the operator securely to assure confident operation. 78mm 3” width seat belt is provided as standard equipment.

**Hydropneumatic suspension for all terrains**
The hydropneumatic suspension assures a comfortable ride even over rough terrain and ensures maximum productivity and operator confidence.

**K-ATOMICS with “Skip-shift” function**
An electronically controlled valve is provided for each clutch pack in the transmission for independent clutch engagement/disengagement. It enables an ideal change in clutch modulation pressure and torque cut-off timing in response to travel conditions. This system and newly added “skip-shift” function ensure smooth shifting and responsive acceleration.

**Built-in ROPS/FOPS cab**
These structures conform to ISO3471 ROPS standard, and ISO 3449 FOPS standard.

**Viscous cab mounts**
Viscous mounts reduce the noise transmitted to the cab and achieve a quiet 77 dB(A) noise level.

**Electric body dump control**
The low effort lever makes dumping easy. A positioning sensor is installed for dump body control which significantly reduces the shock made by the lowering of the dump body.

**Supplementary steering and secondary brake**
Supplementary steering and secondary brake are standard features.
Steering: ISO 5010, SAE J1511
Brakes: ISO 3450

**Three-mode hydropneumatic suspension (Automatic suspension) (Option)**
Suspension mode is automatically switched to one of three stages (soft, medium and hard) according to load and operating conditions, for a more comfortable and stable ride.

Machine shown may include optional equipment.
**RELIABILITY FEATURES**

**Komatsu components**
Komatsu manufactures the engine, torque converter, transmission, hydraulic units, and electrical parts on this dump truck. Komatsu dump trucks are manufactured with an integrated production system under strict quality control system guidelines.

**High-rigidity frame**
Cast-steel components are used in the main frame for high-stress areas where loads and shocks are most concentrated.

**Rigorous dump body design**
The standard dump body is made of 160 kg/mm² 227,520 PSI high-tensile-strength steel for excellent rigidity and reduced maintenance cost. The V-shape design also increases structural strength. The side and bottom plates of the dump section are reinforced with ribs for added strength.

**Reliable hydraulic system**
The oil cooler is installed in the radiator lower tank, improving the reliability of the hydraulic system during sudden temperature rises. Further, in addition to the main filter, a 25-micron line filter is at the entrance to the transmission control valve. This system helps to prevent secondary faults.

**Flat face-to-face O-ring seals**
Flat face-to-face O-ring seals are used to securely seal all hydraulic hose connections and to prevent oil leakage.

**Protection functions supported by electronic control**

**Sealed DT connectors**
Main harnesses and controller connectors are equipped with sealed DT connectors providing high reliability, water resistance and dust resistance.

**Antilock Brake System (ABS) (Option)**
Using its outstanding electronics technology, Komatsu is the first in the industry to introduce ABS on construction machinery. This system prevents the tires from locking, thus minimizes skidding under slippery conditions while applying the service brake.

**Automatic Spin Regulator (ASR) (Option)**
ASR automatically prevents the rear tires on either side from slipping on soft ground for optimal traction.

**Pedal-operated secondary brake**
If there should be a failure in the foot brake, the parking brake and front disc brakes are activated as a pedal operated secondary brake. In addition, when hydraulic pressure drops below the rated level, the parking brake is automatically actuated.

**Lead-free radiator**
In addition to compliance with emission regulations, a lead-free aluminum core is used for the radiator to meet global environmental requirements.

**Brake cooling oil recovery tank**
To protect the environment, a tank is installed to recover brake cooling oil in the event of brake floating seal leakage.

**Advanced monitoring system**
The Komatsu advanced monitoring system identifies maintenance items, reduces diagnostic times, indicates oil and filter replacement hours and displays abnormality codes. This monitor system helps to maximize machine production time.

**Disc wheels (Flange type rims)**
Disc wheels (Flange type rims) provide easy removal/installation for the tires.

**Electric circuit breaker**
A circuit breaker is adopted in important electric circuits that should be restored in a short time when a problem occurs in the electrical system.

**Centralized greasing points (Option)**
Greasing points are centralized at three locations, it enables to approach from ground level.

**Wet multiple-disc brakes and fully hydraulic controlled braking systems**
Realize lower maintenance costs and higher reliability. Wet disc brakes are fully sealed to keep contaminants out, reducing wear and maintenance. Brakes require no adjustments for wear, meaning even lower maintenance. Added reliability is designed into the braking system by the use of three independent hydraulic circuits providing hydraulic backup should one of the circuits fail. Fully hydraulic braking systems eliminate the air system so air bleeding is not required, and water condensation that can lead to contamination, corrosion and freezing is eliminated.

**Extended oil change intervals**
In order to minimize operating costs, oil change intervals have been extended:
- Engine oil 500 hours
- Hydraulic oil 4000 hours

**Centralized arrangement of filters**
The filters are centralized so that they can be serviced easily.

**EASY MAINTENANCE**

227,520 PSI/4000 hours

- Hydraulic oil
- Engine oil

- Filter replacement hours
- Displays abnormality codes

**HD405-7R OFF-HIGHWAY TRUCK**

**Parts colored with red show cast-steel components**

- Hose
- Nipple
- O-ring

- Electric circuit breaker

- Centralized greasing points

- Antilock Brake System (ABS)

- Pedal-operated secondary brake

- Lead-free radiator

- Brake cooling oil recovery tank

- Advanced monitoring system

- Disc wheels (Flange type rims)

- Centralized arrangement of filters

- Extended oil change intervals

- High-rigidity frame

- Rigorous dump body design

- Reliable hydraulic system

- Flat face-to-face O-ring seals

- Protection functions supported by electronic control
**Specifications**

**Engine**
- Model: Komatsu SAA6D140E-5
- Type: Turbocharged, air-to-air aftercooled
- Number of cylinders: 6
- Bore x stroke: 140 mm x 165 mm
- Piston displacement: 15.24 l
- Horsepower: 386 kW
- Gross Weight: 79,840 lb
- Fuel consumption: 3.125 l/km

**Transmission**
- Torque converter: 3 elements, 1-stage, 2-phase
- Transmission: Full-automatic, planetary type
- Speed range: 7 speeds forward and 1 reverse
- Torque converter: Direct drive in 1st gear
- Shift control: Electronic shift control with automatic clutch modulation in all gear

**Body**
- Structure: V-shape body
- Material thickness: 25 mm x 380 mm
- Material: High-tensile strength steel

**Suspension System**
-Independent, hydropneumatic suspension cylinder with fixed throttle to dampen vibration.
- Effective cylinder stroke (front suspension): 250 mm
- Rear axle: 6.8 ft
- Mechanical stopper: 8.1°

**Steering System**
- Type: Fully hydraulic power steering with two double-acting cylinders
- Supplementary steering: Manual control
- Minimum turning radius: 7.2 m
- Maximum steering angle: 43°

**Main Frame**
- Type: Box-sectioned structure

**Brakes**
- Brakes meet ISO 3450 standard.
- Service brakes:
  - Front: Fully hydraulic, caliper disc type
  - Rear: Spring applied, caliper disc type
- Parking brake:
  - Front: Spring applied, caliper disc type
  - Rear: Oil-cooled, multiple-disc rear brakes act on retarder.
- Brake surface:
  - Front: 968 cm²
  - Rear: 5084 cm²

**Hydraulic System**
- Hoist cylinder: Twin 2-stage telescopic type
- Relief pressure: 20.6 MPa
- Hoist time: 10 sec

**Weights (Approximate)**
- Empty weight: 34,400 kg
- Gross vehicle weight: 75,840 kg
- Max. gross vehicle weight: 75,080 kg
- Usable rimpull depends upon traction available and weight on drive wheels.

**Travel Performance**
-To determine travel performance: Read from gross weight down to the percent of total resistance. From this weight-resistance point, read horizontally to the curve with the highest obtainable speed range, then down to maximum speed. Usable rimpull depends upon traction available and weight on drive wheels.

**Brake Performance**
-To determine brake performance: These curves are provided to establish the maximum speed and gearshift position for safer descents on roads with a given distance. Read from gross weight down to the percent of total resistance. From this weight resistance point, read horizontally to the curve with the highest obtainable speed range, then down to maximum descent speed the brakes can safely handle without exceeding cooling capacity.
